

## Love to Code Chibi Chip Microcontroller Board

DEV-14591

Interested in coding, but don't know where to start? Or perhaps looking to add that personal, interactive touch to a craft project? The Love to Code (LTC) system from Chibitronics is designed to enable beginners of all backgrounds and ages to try out paper circuits and programming without the frustration of installing software. If you've browsed the web on your laptop, smartphone or tablet, and used headphones to listen to music, you know everything you need to get started!

The Chibi Chip Microcontroller Board is the heart of the LTC system. You can use the Chibi Chip to bring life to your Chibi Lights LED stickers by making them blink and fade. Add interactivity to your greeting cards and projects by connecting switches and sensors to your Chibi Chip.

You get to pick how to make the programs: either by dragging-and-dropping blocks together using Microsoft's MakeCode Editor, or by writing Arduino-style computer code using Chibitronics' Love to Code Editor.

### INCLUDES

- 1x Chibi Chip Microcontroller Board
- 1x Programming Cable
